**Item 2. Descriptors relevant to the main topic:** Provide a list of words or phrases that indicate the subject matter of prime interest.

Example: Career Motivation  
Career Preference  
Career Aspirations

**Item 3. Descriptors limiting the main topic:** Provide a list of words or phrases that will indicate the specific subject matter of interest.

Example: Socioeconomic Status      Birth Order  
Social Class                      Women  
Educational Level                Females

**Item 4: Search qualifications:** Once the subject matter of the search has been defined, you may wish to refine it with specific requirements such as population, time frame, etc. These qualifications are often essential to information need. However, they can unnecessarily limit the search, causing retrieval of few of the relevant references. Therefore, consider your requirements carefully.

**Item 5: Sorting requirements:** Please indicate if you wish to have references sorted alphabetically by author, with the consideration that no sort specification will result in less processing time and therefore less cost.

**Item 6: Intended use of search results:** Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.).

# PASAR

**PASAR** (*Psychological Abstracts Search and Retrieval*) is a service operated by the American Psychological Association for the benefit of individual users of psychology-related information. **PASAR** information specialists can assist you in thoroughly exploring—and retrieving highly specific references from—the *PA* data base, which contains the more than 140,000 records published in the journal from 1967 to the present.

The **PASAR** Request Form has been designed to assist you in constructing a comprehensive statement of your search requirements. It is important that you make this statement specific and complete. Please provide any additional information that you think will be of help. Instructions for completing each item are provided below and on the reverse side.

**Item 1. Narrative statement of search topic:** Describe the search topic in much the same way you would construct a long title for a report.

Example: The effects of socioeconomic status, educational level, or birth order on career motivation in women.

Charges for processing a **PASAR** request are based on the amount of computer time required to perform a search. Typically these charges range from \$40 to \$60. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and might result in fewer references retrieved than a broad search with few limiting factors.

*PA* index terms and conceptually related words or phrases are combined in Boolean statements to define search parameters. **PASAR's** natural language search capability enables rapid retrieval of records that would remain lost to the manual searcher devoting months to the same task.
